

Rentit User Manual

How to install and compile

1. Clone master repository from <https://github.com/adoubekk/rental-web-app>
2. In terminal go to the rental-web-app directory and run: npm install
3. Once installed, run: npm run dev
4. Once it compiles the code will be running at <https://localhost:8080/> (must have https://)

How to navigate website

1. On the Home page you can search for items you want to rent, see a carousel of featured items (still in backlog), and see the different categories items have been sorted into.
 - a. Searching or clicking on the categories will take you to the search page
 - b. On the search page you can search all items or choose to filter your results based on what category you are interested in.
2. From the home page, you can click sign up to make a user account
 - a. If you already signed up, then just click sign in and enter your account information
3. Once you are signed in, you can view your profile page by clicking on your username/drop down menu in the upper right hand corner.
 - a. The drop down menu has the buttons to go to your Profile page, edit profile, post item, and sign out
4. The profile page displays the items you are renting out, your Bio, email, reviews, and items you have reserved and the times you have then reserved for.
5. Edit Profile allows you to change your username, bio, and contact information. (profile picture ability in backlog)
6. Post Item allows users to post items they want to rent out
 - a. Users can add pictures, description, price, and location of their items
7. To edit an item you posted, navigate to your profile page and click on the item you want to edit, you will be taken to the edit item form for that item.
8. When you want to sign out, click on your username in the upper right hand corner and select sign out from the drop down menu.
